05

Conclusion

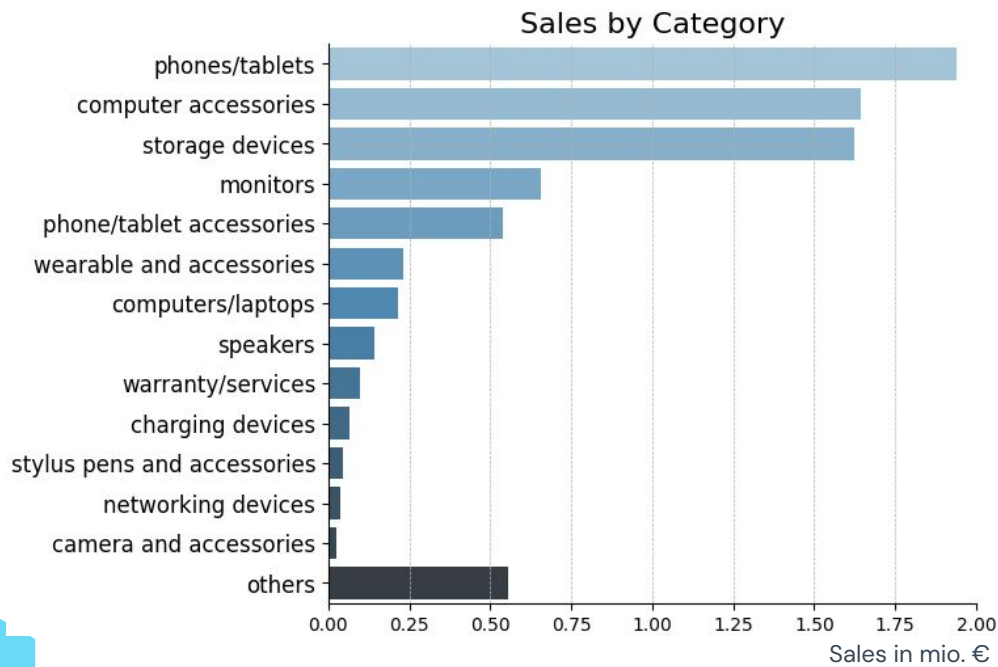

01

Product categorization

Products are categorized by type to streamline analysis

14 categories in total

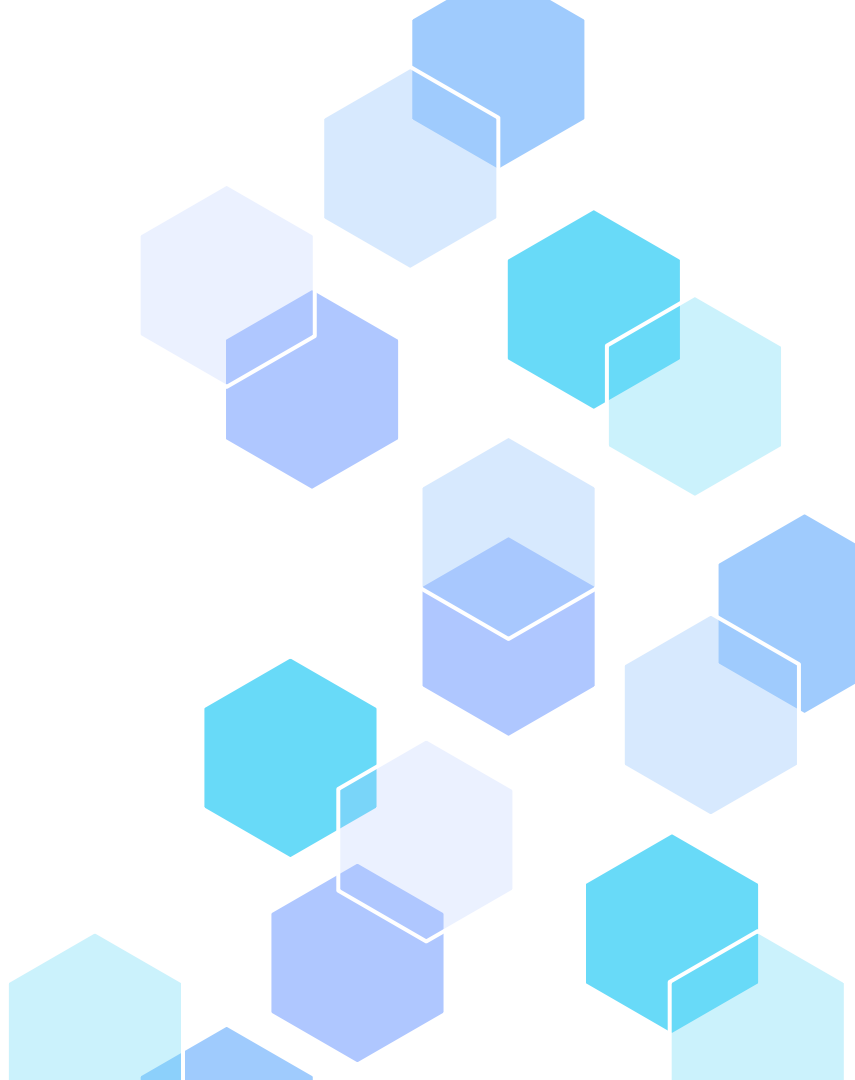

82% of sales¹ comes from the top 5 categories

1) Sales is based on the unit price the product was actually sold for and excludes transport, shipment or other costs.

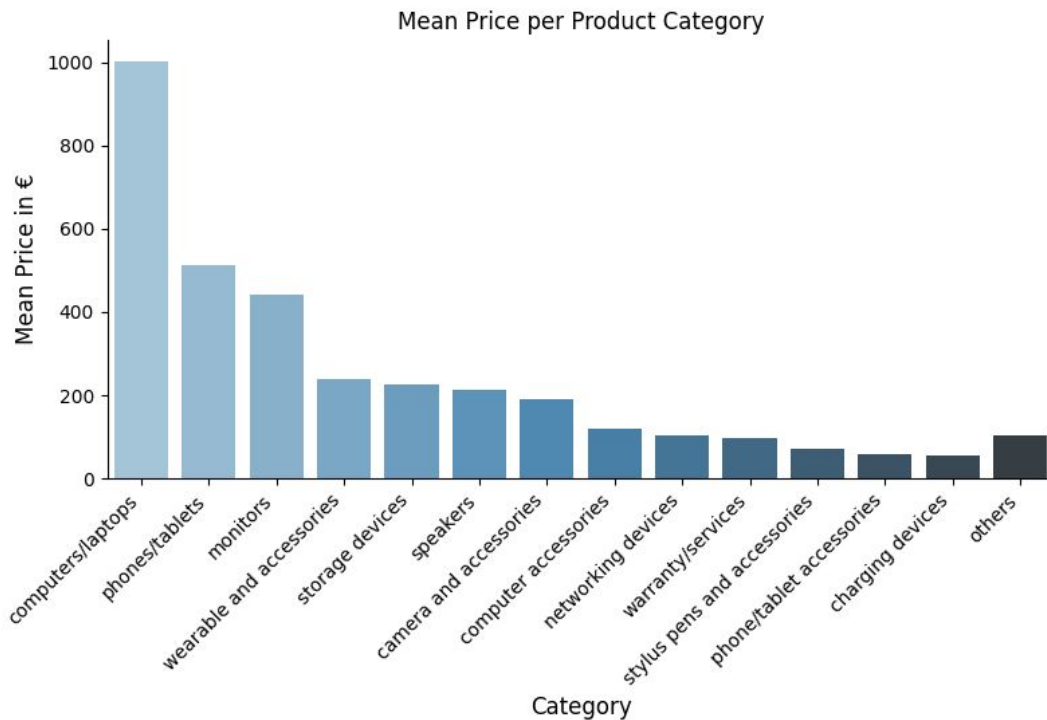

02

Price

Distribution

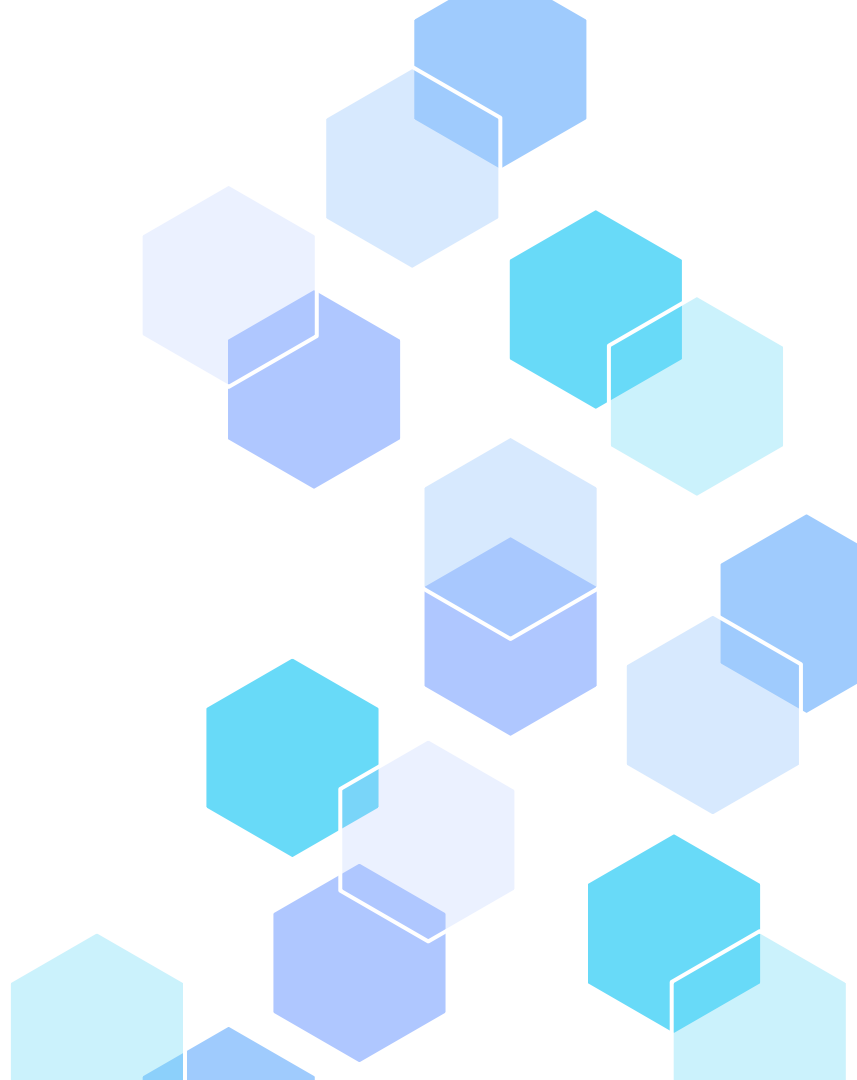

Analyzing price¹ distribution revealed diverse pricing strategies

1) The prices used in this analysis are the recommended retail prices.

03

Discounts

49,404

Number of products being discounted

92.81%

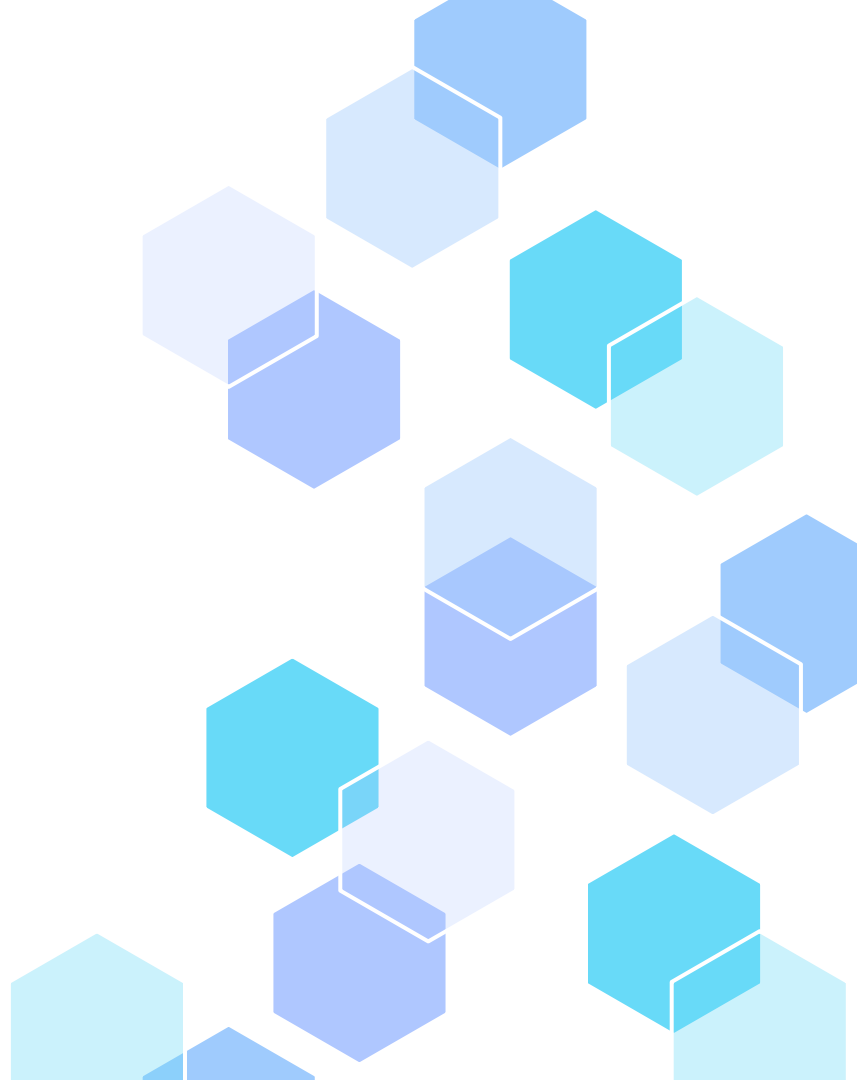

Share of discounted products

23.24%

Average discount percentage

04

Seasonality

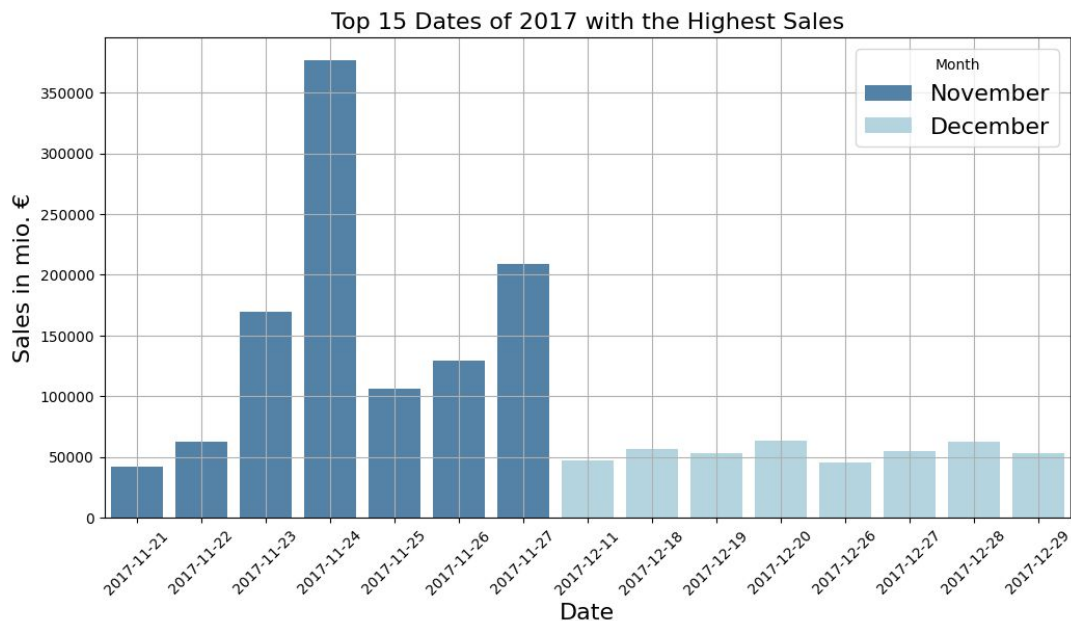

Sales increased significantly by 175% in Nov vs. Oct 2017

- Higher sales in November and December even with smaller discounts
- The increase might be due to discounts or natural customer purchasing trends

1) Sales is based on the unit price the product was actually sold for and excludes transport, shipment or other costs.

Christmas and Black Friday prove to be effective discount periods

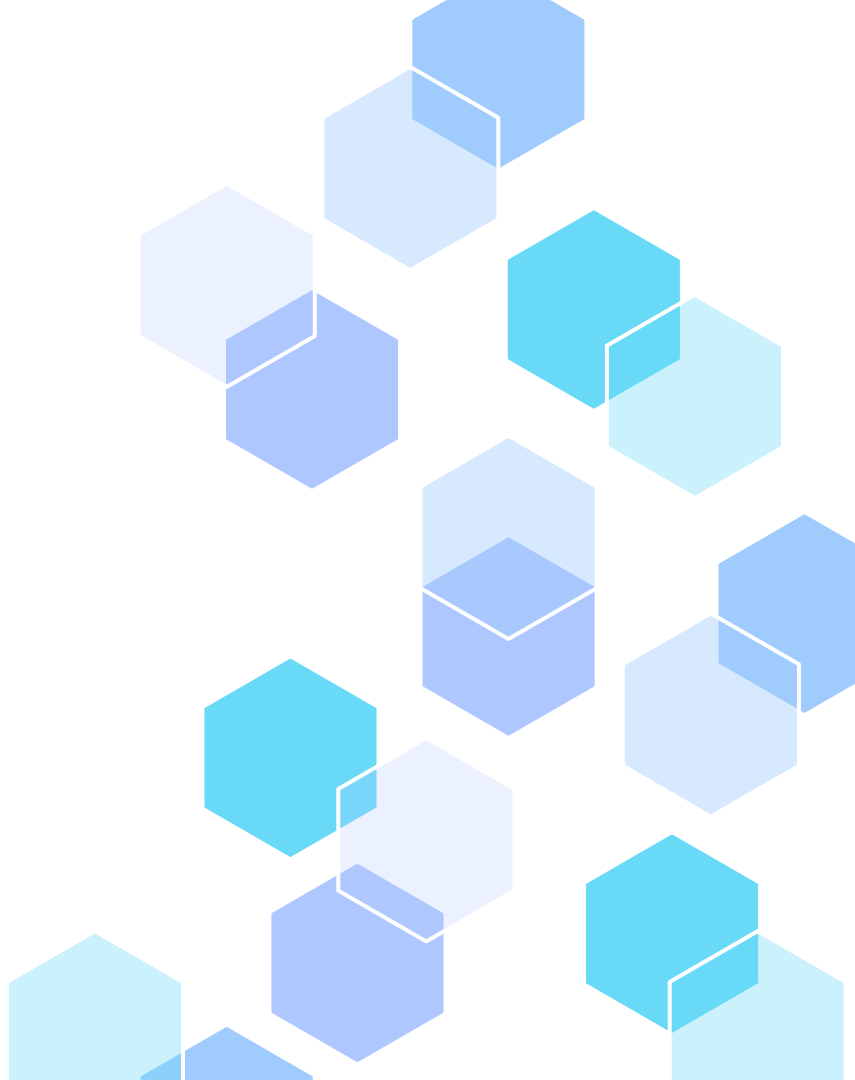

Black Week accounts for 23% of sales in 2017

Christmas accounts for 16% of sales in 2017

1) Sales is based on the unit price the product was actually sold for and excludes transport, shipment or other costs.

05

Conclusion

Continuing discounts during high-impact periods is recommended

**Continue
discounts
strategically**

E.g., phones during a new release

**Target
high-impact
periods**

Christmas, Black Week etc.

**Further
analysis to be
conducted**

Customer behaviour and location analysis

Disclaimer: Data includes one full year, with manipulated data for reliability due to missing values, exclusion of products priced above 1000€, only completed orders, and only data supported by multiple sources.
